

THE CORRECT HOOF BOOTS FOR YOUR HORSE

WHAT DO I HAVE TO CONSIDER WHEN USING HOOF BOOTS?

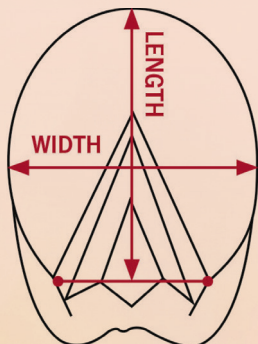

- ✓ Measure hooves accurately before purchase
- ✓ If necessary, get professional advice
- ✓ Regular hoof trimming and care by a specialist (approx. every 5-6 weeks)!
- ✓ Before putting on the boot, make sure the hooves are clean and remove any stones from the inside of the boot.

HOW DO I MEASURE THE HOOVES OF MY HORSE?

- ✓ Ideally measured directly on the picked up hoof
- ✓ Best time approx. 1 week after hoof trimming
- ✓ Each hoof must be measured individually

MEASURE CORRECTLY

1. Take measurements at the widest point of the hoof to determine the width.
2. Measure the length of the hoof from the toe to the buttress line of the heel (please do not include the heel bulbs in the measurement).

- If the measurements do not exactly match the size of the hoof boot, we recommend the next larger size.
- If the width and length measurements are different by more than one size, this boot style is not recommended.

HOOF DIMENSIONS FROM _____

	Width	Length
Left Front		
Right Front		
Left Hind		
Right Hind
